Welcome to the era of intuitive weaving

With **PicConnect**, a new fully digital platform, Picanol is offering a wide range of features, from industrial IoT to service-related applications.

PicConnect enables you to quickly react to changes in the weaving room, and it will have an immediate impact on the performance of the weaving machines. It will not only change how you interact with your machines but also the way you interact with Picanol. For this reason, Picanol can boldly state that PicConnect is bringing you into the era of intuitive weaving.

Increase overall efficiency

In the **Production monitoring** application, it is possible to track the production of your weaving machines. Real-time monitoring of the machine status enables you to react quickly with regard to operational tasks and increase overall efficiency. The historical data, graphs, and tables provide the hard data to pinpoint exactly where action is needed.

Easily order spare parts

The new webshop for original Picanol spare parts, **PartsLine**, is a cornerstone of PicConnect. PartsLine offers a seamless online shopping experience, covering everything from quotations to reviewing orders and invoices.

Plan your maintenance

The **Action center** allows you to design, execute and monitor a maintenance plan. This gives you a complete overview of all upcoming jobs. Thanks to the logbook functionality one can see everything that has happened on the machine in the past.

Control your energy consumption

The **Energy monitoring** application keeps an eye on the power consumption of your machines. In the case of airjet machines, also air consumption is monitored. It gives a better insight into the total energy flow in the weaving room, helping to reduce the overall energy costs and to adhere to the Picanol principle of "Sustainability Inside".

Manage all your Picanol machine settings

The **Style administration** application allows you to swiftly open, edit, and manage Picanol machine settings through a central repository. A unique feature of PicConnect is that you can now easily compare and copy settings between different machines, ensuring the machines are all using the optimal settings.

Scan the pictures of the features in this leaflet with the Picanol app and learn more about their possibilities

PicConnect Specifications

To request your PicConnect environment, contact your local After Market Sales Representative.

Web-based

PicConnect is a web application. The platform can be accessed from the browser of any device connected to the internet, even the display (PD15) of our weaving machines.

Cloud-based

PicConnect is cloud-based. The latest applications and updates are automatically available in your own secure environment.

Connectivity

To leverage the full extent of possibilities the platform offers, machines can be connected using an internet connection. All machines with a BlueBox platform can be connected.

Packages

The free Bronze package is available to all our customers. With the paid Silver package, you get additional applications that further leverage the machine connectivity.

	Bronze	Silver
PartsLine	●	●
Machine configuration	●	●
File management	Basic	Full
Style administration	Basic	Full
Production monitoring		●

About Picanol

The Picanol Group is an international, customer-oriented group specialized in the development, production and sale of weaving machines, cast iron parts and controllers. Its Weaving Machines division (Picanol) develops, manufactures and sells high-tech weaving machines based on airjet or rapier insertion technology.

Picanol supplies weaving machines to weaving mills worldwide and also offers to its customers products and services such as weaving frames and reeds, training, upgrade kits and spare parts. For more than eighty years, Picanol has played a pioneering role in the global industry and is currently one of the world's leading weaving machine manufacturers.
